## APPLIES TO

All Point Mobile Android devices

---

## Set Subnet Mask for Static IP

When you set the IP settings as static, fields such as IP address, Gateway will be expanded.

Among the fields, find **Network prefix length**. And then, enter the **bit length of the subnet mask**.

## Bit Length of Subnet Mask?

If you only know the subnet mask with a format same as IP address like '255.255.255.252', refer to [IP Subnet Calculator](#).

Find your subnet from the **Subnet** dropdown menu, and check the **/nn**. And then, enter the **nn** into the bit length of the subnet mask field on the device.

For instance, if the subnet mask is '255.255.255.252', enter 30.
