

Disable or Enable Applications via Scan2Stage

For security or productivity issue, IT administrator wants to hide or show applications to common usage(e.g employees).

IT administrator can use Point Mobile's provisioning solution, Scan2Stage for this issue.

Scan2Stage helps you to manage EmSolution applications via blacklist feature.

APPLIES TO

Scan2Stage

How to Use Blacklist Feature

First of all, Launch Scan2Stage console on your PC

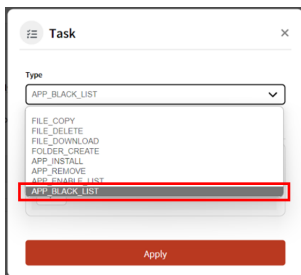

1

Go to **Task** tab, and click **Task**.

2

Select **APP_BLACK_LIST** in Task Type select list

3

Enter the package name to be blocked into the ExtraValue field, and click **Apply**.

Please refer to the below to find the package name you want.

Click to find package name

EmSolution Package & Activity List

Application Name	Package Name	Activity Name

What About The Other App?

If you want to know package and activity name of Google or other application, please use Apk Analyzer.

Please refer to the article below to figure out how to use Apk Analyzer.

- [Apk Analyzer - Package and Activity Name](#)

4

After adding all package name that you want to block, Click OK

Then, save configuration JSON profile and generate QR code.

When you scan the QR code, the device will be provisioned automatically just like you set.
