

Screen Lock on EmKiosk (Old Version)

You may want to use screen lock function when EmKiosk is running.

For now, EmKiosk does not support the screen lock function. But you can use the function by 3rd party screen lock application.

This article describes how to configure the screen lock on EmKiosk mode with Scan2Stage.

If you properly follow the steps, you can lock the screen not registering the 3rd party application on EmKiosk layout.

Newly added EmKiosk Hidden App feature from Scan2Stage 10.0.8 can make this out.

APPLIES TO

Scan2Stage - v10.0.8 ~ v10.0.10

EmInstaller - v1.1.5 ~ v1.1.8

EmKiosk - v1.0.7 ~ v1.0.9

If you are using later & latest version, read [Screen Lock on EmKiosk](#).

Point Mobile highly recommends updating the applications to the latest versions for stable operation.

Configure Screen Lock via Scan2Stage

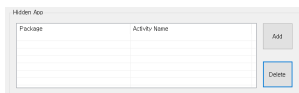

1

Configure EmKiosk with Scan2Stage referring to below article

[Set EmKiosk using Scan2Stage](#)

2

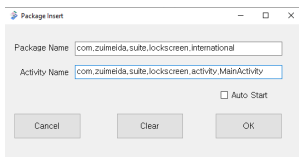

Find newly added section, [Hidden App](#)

3

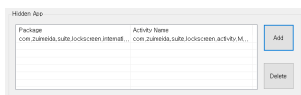

Click [Add](#), and then input the package name and activity name of installed 3rd party screen lock solution

(In below screenshot, 'ZUI Locker' app's package & activity name is inputted for example.)

4

Click [OK](#) and check the inputted hidden app information is listed on the [Hidden App](#) table

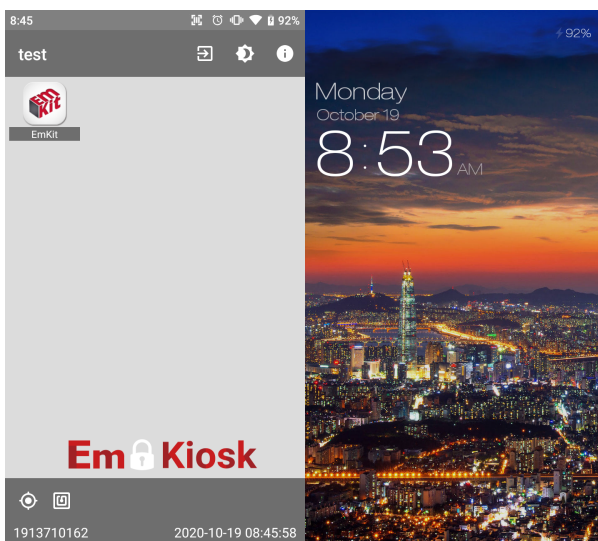

5

After configuring the other desired settings, save as JSON file and go on the provisioning process

Process Overview of Staging & Provisioning the Devices

6

Wait for completing the provisioning process. And then check if the screen lock is properly configured
(You may be needed to set up the 3rd party screen lock solution's settings first.)
