

Get PM3 Scan Data as Record type or Text File

APPLIES TO

PM3

Summary

Record type is for Bluetooth communication.

So you cannot get the scan data as record type with USB communication.

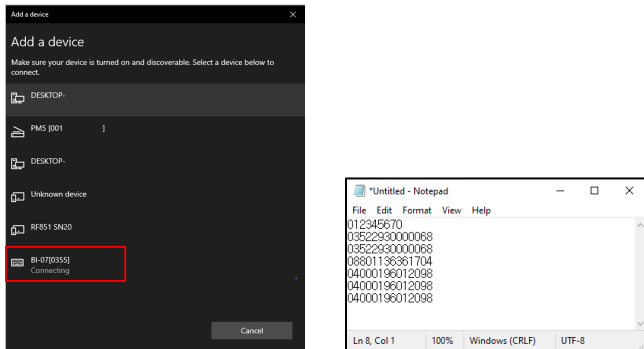

- Get data as record type → Use Bluetooth communication
- Get data as txt file → Use USB Communication

Refer to the following to find ways for connecting PM3 and PC.

Get Scan Data from PM3

1) Bluetooth Connection → Record Type

If you connected PM3 with your PC by Bluetooth, you can get the scan data as record type with Bluetooth HID mode.

2) Connect USB communication → Text File

If you set the PM3 as USB disk mode, PM3 collects the scan data instead of sending it directly (like a USB storage).

After work, connect PM3 and PC with USB cable, and find a text file (.txt) containing scan data.

For more detail, see below article.

Get Scan Data as Text File(.txt) with PM3
