

# Get Scan Data in Ivanti (Wavelink) Velocity

When you use Point Mobile devices with Velocity, you must set a specific profile to get the decoded barcode data.

---

## APPLIES TO

- Android powered Point Mobile devices
  - PM5
-

# Barcode Profile for Velocity

Point Mobile devices provide the Custom Intent result type to get the decoded data as a customized intent.

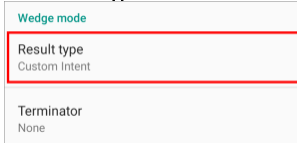

Using the result type, set the profile as follows to use Velocity.

Action	"com.wavelink.intent.action.BARCODE"
Category	"android.intent.category.DEFAULT"
Extra decode string value (String)	"com.wavelink.extra.data_string"

## How to Set

### Android Devices

1. Go to Settings (or EmKit) > ScanSettings.
2. Tap **Basic**.
3. Set **Result type** as **Custom Intent**.

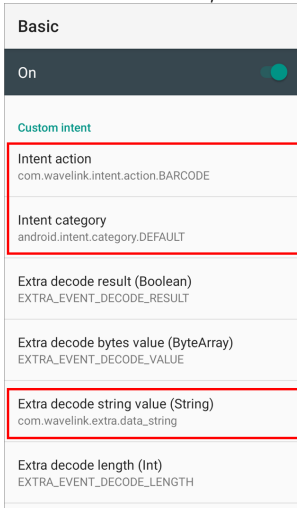

Wedge mode

**Result type**  
Custom Intent

Terminator  
None

4. Scroll down the screen, and set each items as described above.

**Basic**

On

Custom intent

**Intent action**  
com.wavelink.intent.action.BARCODE

**Intent category**  
android.intent.category.DEFAULT

Extra decode result (Boolean)  
EXTRA\_EVENT\_DECODE\_RESULT

Extra decode bytes value (ByteArray)  
EXTRA\_EVENT\_DECODE\_VALUE

**Extra decode string value (String)**  
com.wavelink.extra.data\_string

Extra decode length (Int)  
EXTRA\_EVENT\_DECODE\_LENGTH

### PM5

There are 3 ways to change the Custom Intent settings of PM5. Click each way to see the detailed guide to set the configuration. (The guide of using WedgeProfile requires log-in.)

1. [Set from RingControl app](#)
2. [Apply JSON file](#)
3. [Set WedgeProfile for PM5](#)

All methods requires RingControl app on the host device to be connected with the PM5. (Must use Point Mobile host devices.)

You can download the RingControl app from [Service Portal](#).

#### Cannot Log-in ?

Please contact your distributor or Point Mobile sales team if you want to download the app.
