

Set Illumination Brightness via Provisioning Profile

For some scanner, the illumination brightness level becomes adjustable. Refer to the [Illumination Brightness Level](#).

If you want to set up the level in the provisioning process, read this article carefully and follow the steps.

APPLIES TO

Creating a profile

- Scan2Stage: v10.0.15 and higher
- PMDM console

Applying the setting

- PMDMAgent: v1.0.0 (or EmKitAgent: v2.2.26 and higher)

Set Illumination Brightness

1

Navigate to **Scanner**.

2

Select **Apply Scanner Settings** checkbox.

3

Select a scanner type.

(Refer to the [Illumination Brightness Level](#) to find which scanner type supports the illumination brightness. If you select not supporting type, the illumination setting does not show.)

4

Go to **Options**.

5

Set the Illumination level.

6

Save the profile, and perform a provisioning.
