Check Link Speed

APPLIES TO

All Point Mobile Android devices

What is Link Speed?

Link speed is the **theoretical maximum speed** that the device can communicate to the linked router.

> Link speed is not your actual speed from your Internet provider or the website that you are trying to download.
>
> Actual speed is negotiated due to the provider's restrictions or the diffraction of wireless signals.

How to Check Link Speed?

1. Go to **Settings** > **Network & internet** > **Wi-Fi**
2. Tap connected Wi-Fi
3. Find **link speed** from the network detail screen.
   If you are using the version above Android 8, you may need to expand **Advanced**.

Under Android 8	Android 9 and above
