

# Screen Recording

Built-in screen recording has been added from Android 11.

You don't need an extra app to capture what's happening on your device.

Find how to record the screen with this article.

---

## APPLIES TO

Point Mobile with Android 11 and above devices

---

## Use Screen Record

1

Open quick setting panel and find Screen Record.

2

Turn on the options if you need, and tap **START**.

- Record audio: Also record the audio
- Show touches on screen: Show touches with a small circle.

While recording, Android System can capture any sensitive information (password, photos, etc.) that visible on your screen or played on your device.

3

You can find a notification and status icon while recording.

4

If you want to stop recording, tap the notification or Screen record icon from quick setting panel.

5

The recorded video is saved as below.

- Location: **/Movies** folder
- Filename: **screen-YYYYMMDD-hhmmss.mp4**  
(YYYYMMDD-hhmmss: The date and time that records the video.)  
ex) screen-20220422-093830.mp4

# Example

See the example video recorded with the built-in screen record feature.

Your browser does not support the HTML5 video element
